

1. difference between `get()` and `setdefault()` in dictionary?
2. How to erase out all elements in a dictionary?
3. How to create a set?
4. How do you find count of elements in a set?
5. Find the maximum and minimum values in a set?
6. Difference between `remove()` and `discard()`. Explain with an example set?
7. If I want to delete the first element of the set, how do you achieve it?
8. How do you check all elements of a set ( $a = \{1, 3, 5\}$ ) is present in another set ( $b = \{1, 2, 3, 4, 5\}$ )
9. How to add a single element to a set?
10. How to include multiple elements in a single go to a set?
11. By using dictionary comprehension, create a dictionary for even only numbers (for a range (1, 51) with 'number' as key and also 'number' as value?
12. Create a script to create a union of sets?
13. How do you iterate over a set with `enumerate()`?
14. How to clear a set?
15. Write a program to check if a given value is present in a set or not?
